

# Earthdata Pub (EDPub)

**Leigh Sinclair** 

### • Why EDPub?

- Each NASA DAAC is dealing with an increasingly diverse number of publishable data products from diverse data producers.
- Data producers face the challenge of diverse data publication processes wen interacting with the DAACs to deliver their datasets and data product information.
- EDPub addresses these challenges by providing a common user interface to create a more consistent and streamlined data publication experience across EOSDIS. The EDPub front-end applications Forms, Dashboard, and Overview enable DAACs and data producers to communicate more easily about in-queue data products, gather the information needed, and reduce the overall time required to approve and publish data products.

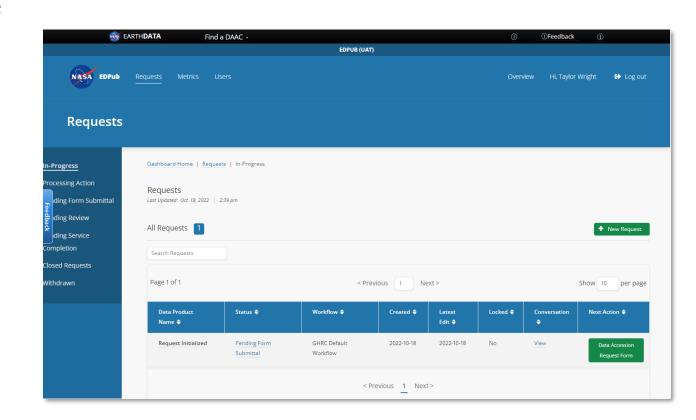

### Cross-DAAC Collaboration

EDPub Development Team	EDPub Information Team
<ul> <li>Project Management</li> <li>Doug Newman (NASA/ESDIS)</li> <li>Will Ellett (GHRC)</li> <li>Facilitator</li> <li>Leigh Sinclair (GHRC)</li> <li>Developers</li> <li>Daine Wright (ORNL)*</li> <li>Kimberly Broughton (ORNL)</li> <li>Chelsey Stahl (ORNL)</li> <li>Eddie Campos (GHRC)</li> <li>Davis Gaunt (GHRC)</li> </ul>	<ul> <li>Team Leadership         <ul> <li>Matt Donovan (ORNL)</li> </ul> </li> <li>Team Membership         <ul> <li>Participants from seven+ DAACs, including Leigh Sinclair (GHRC)</li> </ul> </li> <li>In addition to creating/revising content for the forms, dashboard, and overview pages, the EDPub Information Team serves as a key user testing group.</li> </ul>

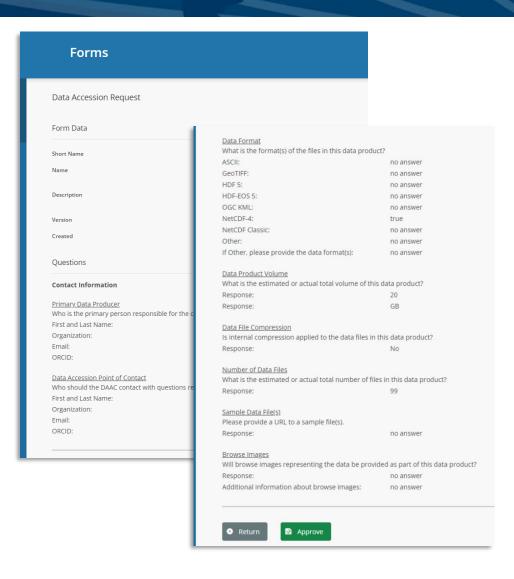

### Data Producers Can...

- Formally request the accession of data products at a DAAC or DAACs
- Provide information for data products that are approved for publication
- Communicate with DAAC data management teams through conversations in the request dashboard
- Monitor the status of their access and publication request
- Upload sample data and documentation

### DAACs can...

- Use defined custom workflows and develop custom modules to meet DAAC-specific requirements
- Use a metadata editor of preference
- Formally review/approve data accession and publication requests
- Communicate with data producers through conversations in the request dashboard
- Verify information for data products that are approved for publication
  - Metadata, sample files, documentation, etc.

### **All Quarters**

#### **DAAC Onboarding Support**

- Support DAAC onboarding to EDPub so that DAACs are comfortable with EDPub functionality
- Related (1st Quarter only): Prototype user display of customized workflows so that interested users can test in the UAT environment
- Currently 4 DAACs in stages of onboarding or using their EDPub workflows in production GHRC, ORNL, ASDC, GES DISC
- Office Hours conducted bi-weekly
- Matt Donovan joined as a content lead to bridge dev and info teams
- Daine preparing to offboard / new DAAC team members preparing to support EDPub

### 1<sup>st</sup> Quarter (Oct. – Dec. 2022)

#### Manual Import of Metadata from EDPub to MMT

 Import EDPub metadata in MMT so that ASDC can begin testing collection level metadata publication to CMR from EDPub

#### **EDPub Overview Updates / Web Info Architecture Improvements**

- Update Overview page content in EDPub so that external users can clearly understand EDPub functions and purpose
- Update EDPub website information architecture and content so that readers understand the distinction between EDPub the application and EOSDIS publication guidelines

#### **Notification System Work**

- Ensure Notification System is fully integrated into EDPub so that users are notified of changes in EDPub without having to constantly monitor the dashboard
- Ensure the EDPub Notification System handles expected email usage in production and allows control over the EDPub email templates

### 2<sup>nd</sup> Quarter (Jan. – Mar. 2023)

### **EDPub Overview Updates / Web Info Architecture Improvements**

Iterated changes between the EDPub Development Team and the EDPub Information Group
 Continued Notification System Work

- Ensure Notification System is fully integrated into EDPub so that users are notified of changes in EDPub without having to constantly monitor the dashboard
- Ensure the EDPub Notification System handles expected email usage in production and allows control over the EDPub email templates

#### **Data Upload Solution**

- Decide on a data upload solution that allows trusted partners and collaborators to upload files, requiring Cognito+MFA with 3rd party authenticator, so that Security team can evaluate and make recommendations
- Integrate single file data upload solution into EDPub so that data producers can provide sample files and documentation to DAAC staff

### 3<sup>rd</sup> Quarter (Apr. – Jun. 2023)

### **EDPub Overview Updates / Web Info Architecture Improvements**

Completed changes and published changes to Production

#### **Continued Notification System Work**

- Ensure Notification System is fully integrated into EDPub so that users are notified of changes in EDPub without having to constantly monitor the dashboard
- Ensure the EDPub Notification System handles expected email usage in production and allows control over the EDPub email templates

### **Continued Data Upload Solution**

- Decide on a data upload solution that allows trusted partners and collaborators to upload files, requiring Cognito+MFA with 3rd party authenticator, so that Security team can evaluate and make recommendations
- Integrate single file data upload solution into EDPub so that data producers can provide sample files and documentation to DAAC staff

#### **DAAC Module Creation**

Supported GHRC user guide upload module

### 4<sup>th</sup> Quarter (Jul. – Oct. 2023)

#### **Continued Notification System Work**

- Ensure Notification System is fully integrated into EDPub so that users are notified of changes in EDPub without having to constantly monitor the dashboard
- Ensure the EDPub Notification System handles expected email usage in production and allows control over the EDPub email templates

#### **Data Upload Solution - Related**

 Collaborated with the CUE Group - Trade Study: Scalable On-Demand Anti-Virus service for newly uploaded S3 objects

#### **Continued DAAC Module Creation**

Supported GHRC user guide upload module

#### Security/Other

- Update the EDPub CAAP in order to properly distribute funding for FY24
- Update EDPub OSA to meet latest IT Security Requirements

# **Next Steps**

- Continue Onboarding DAACs
  - NSIDC
  - PO DAAC
  - LP DAAC
  - Possibly more later in the year
- Implement metrics on the dashboard
  - Number of DAACs using EDPub
  - Number of datasets published by EDPub
  - Time to publish each dataset

- Move single file upload to Production
- Complete notification system
- Support existing DAACs who have onboarded
- Support DAACs creating modules for their respective publication workflow

### Resources

### EDPub Wiki Documentation

- EDPub Home
- EDPub Support
- Accessing EDPub
  - Includes instructions to receive a UAT user account
- EDPub UX Resources
