

APR2 Status for Sep 1 Post Flight

Submitted by **durden** on Sat, 09/04/2010 - 10:46

- **APR-2**
- **Earl**

Flight Date:

Wednesday, September 1, 2010

Sortie Number:

10-06-12

APR-2 collected data on all eye passes and outside legs around Earl. Only one problem was noted - we failed to record data during the first portion of the second eye pass. We believe that data started recording in the SE eyewall and continued through the rest of the pass. The resulting file has an incorrect heard and will be fixed for processing.

The data on the first pass showed a small area of precipitation within the eye, possibly remnant of an inner eyewall. The remaining passes showed a very clear and apparently contracting eye.

Status:

Green
