

# APR2 Status for Sep 3

Submitted by **durden** on Sat, 09/04/2010 - 10:58

- **APR-2**

Flight Date:

Friday, September 3, 2010

APR-2 instrument is working well and ready to fly.

We have implemented a new capability for display of vertical reflectivity slices in near real time. We found that the delay in this processing appears to have been caused by our system's trying to resolve network addresses. We believe that this problem is fixed and that there should be much less delay in displaying the near real-time data on future flights. This impacts only the near-real-time. The science data is recorded separately and processed post-flight.

Status:

Green
