- [2DVD](#)

Flight Date:

Thursday, May 12, 2011

Status:

Green

4 of the 5 NASA 2DVDs are currently running. SN\_25 may have been unplugged so that the farmer could cut his winter wheat field (the unit is in the middle of the field). This will be checked soon.

All 5 of the NASA 2DVDs collected data from yesterday's event. Attached images show the rain rates (integrated over 60 sec) for each unit.
