- [2DVD](#)

Flight Date:

Saturday, May 21, 2011

Status:

Green

All 5 NASA 2DVDs are currently collecting data. An attempt will be made to calibrate SN_25 today.

Updated information about yesterday's event:

Three of the units (SN_36, SN_37, and SN_38) stopped collecting data on 05/20 around 1040Z. Two possible reasons for this: 1.) power was disrupted to the unit 2.) water was blown into the units and onto the mirrors. SN_25 and SN_35 collected data through the entire event.
