

# AMPR Status

Submitted by flafontaine on Wed, 05/04/2011 - 08:43

- [AMPR](#)

Flight Date:

Wednesday, May 4, 2011

Status:

Yellow

AMPR status is basically unchanged since the last flight on 27 April. The instrument was pulled from the ER-2 and worked on to try to address the problems with the 37 GHz (H and V) and the 85 V. A sky test was done and all channels were operating normally without the issues occurring during flight. The next flight will be our best test as to instrument health.

Attached are TB images from the flights on 4/22, 4/25 and 4/27. These images supersede all other older images!
