

AMPR Status

Submitted by flafontaine on Thu, 05/26/2011 - 14:22

- [AMPR](#)

Flight Date:

Tuesday, May 24, 2011

Status:

Yellow

AMPR status is still yellow but some improvement has occurred. The 85H is holding on a bit longer into the flight as well as the 37H lasting the entire flight, but both with mild to considerable noise. The 37V is still saturating in the first half of the flight. The TB images follow. Impressive ice scattering was noted during this flight,
