- [APU](#)

Flight Date:

Tuesday, May 10, 2011

Status:

Red

Due to the large hail threat, the APU solar panels are being outfitted with insulation protection. The units have been shut down to allow the solar batteries to charge before covering the solar panels. They will be switched back on this evening or earlier if precipitation looks likely.

The APUs can run 2-5 days without solar power. The insulation will be removed once the large hail threat has passed.
