- [APU](#)

Flight Date:

Thursday, May 12, 2011

Status:

Green

All 16 APUs are currently collecting data. The units are back to charging on solar power - the hail protection insulation was removed yesterday afternoon/evening.

All 16 APUs collected data during yesterday's event. See Dave Wolff's webpage for nice looking images.

Notes:

APU09: The gauge data is likely garbage - the pulse channels on the data logger have failed.

APU04: Wireless comms outage during the event yesterday - the data will be uploaded to the ftp server later today.
