- [HIWRAP](#)

Flight Date:

Tuesday, May 17, 2011

Status:

Green

Instrument was cold soaked on return possibly because of the high humidity in Omaha. The instrument and data disk were not turned on until 5/21 to let them dry out. Spot check of data indicates data collection was successful. Files are currently being copied and spare disk will be used for next flight. Instrument after dry out period appears to be operating nominally with the spare disk.
